

SEAHUNTER 8 M.

SPECIFICATIONS

This RIB is highly manoeuvrable, extremely fast and has excellent handling characteristics. The aluminium Seahunter combines the advantages of both the Tornado and of an aluminium vessel.

SEAHUNTER

- Length: 8.00 metres
- Beam: 2.30 metres
- Hull: 5 mm marine grade aluminium
- Fender: Special D-fender (non air-filled tube)
- Draught: 1.00 metre/0.50 metre trimmed up
- Maximum speed: 100 kilometres per hour
- Operational range: 500 kilometres
- Weight: 1,100 kg
- Motors: max. 300 hp engine power
- Passenger capacity: 9 people
- Unsinkable with the self emptying tub
- Recyclable and sustainable
- Option with bullit-proof layer

Available in a fully-equipped standard model with 3 options:

- Outboard drive
- Diesel inboard stern drive
- Diesel inboard waterjet.

Soon also deliverable with diesel outboard drive.

Also available fully customised

For example with a dive door in the side, an adapted number of seats and more or less storage or work space.

- Can be transported in a shipping container.
- Standard CE-B certificate
- SOLAS requirements optional

INFORMATION

The remarkable handling characteristics of the Seahunter make the vessel perfect for applications such as offshore, the seismic industry, rescue and salvage companies and other nautical sectors.

The hull is made of 5 mm marine grade aluminium. To achieve optimal strength, this is welded in full to produce an extremely strong vessel. In contrast to a RIB (rigid inflatable boat), the Seahunter has a special D-fender instead of an air-filled tube. An air-filled tube can leak in certain circumstances, while the special fender we use will never lose buoyancy under any circumstances.

The water effectively flows off the hull, keeping the boat dry even at top speed and with two and a half foot waves. And if water does get into the vessel, it is absolutely no problem because the cockpit is completely self-bailing. The deck is treated with the same material that is used to finish the fender. Therefore, water, oil or lubricants will never cause slippery surfaces.'

Custom made

The Seahunter is available in a fully-equipped standard model, but can also be fully customised, for example with a dive door in the side, an adapted number of seats and more or less storage or work space.

The fender is available in various models. Possible options include a ballistic fender up to NIJ4 class, which is bullet proof, or specially impregnated fenders that can withstand heat up to 200°C and are used for fire fighting vessels. Furthermore, the damping characteristics can be set up exactly as desired and of course it is also possible to combine different damping characteristics into one fender.

The standard Seahunter model is 8 m long with a 200 hp motor, available from €99,000 plus VAT.

The organisation

Workboats.nl is a partnership between KD Workboats and Post Workboats. These companies each have over thirty years of experience in the maritime industry. Workboats.nl specialises in the development and production of fully equipped vessels for rescue and salvage companies, the offshore and the seismic industry and other nautical sectors. Customers can rely on worldwide 24/7 service.
